

Curtain Wall or Permanent Wall?

The benefits of buying an Industrial Curtain Wall

It's the question we hear over and over again; "Why should I install a curtain instead of a regular permanent wall?" Although we have dozens of answers for this question, here are the top reasons:

Flexibility

Once a brick wall is up, it's up. Curtains easily slide out of the way on a track and roller system when not needed. Curtains are constructed in custom sizes up to 30' wide. Then they connect to each other with Velcro, enabling the user to cover an unlimited amount of width. This allows you to retract any or all wall sections to access the other side, or to increase your work space. Also, if your facility layout changes, Goff Curtain Walls can be relocated & used elsewhere, very quickly and easily.

Space

Aside from the flexibility, curtains are also a lot thinner. Typical brick walls are between 10" and 12" deep. Goff's curtain walls are less than an 1/8" thick. The mounting hardware is less than 1 1/2" wide and only takes up a little space on your ceiling.

Installation

Installation of a Curtain Wall is easier, cleaner, and faster and does not require you to get any special permits. Solid wall construction will generate a lot of dust, which can be a hassle for some businesses and not acceptable for others like food processing facilities.

Durability

When Goff's Curtain Walls are "bumped" with a forklift, pallet-jack, etc. (or anything else), they will NOT be damaged. Solid walls would be damaged and repairs can be very costly & time consuming.

Safety

Goff's Curtain Walls are constructed with a clear middle window, allowing you to see through wall providing a safety feature. Should someone become injured or sick while working alone, they can be seen where others can help them.

PRICE!

Lastly, and maybe most importantly, Goff's Curtain Walls are nearly 1/3 the price of a permanent wall!
