

Goff's AERO-CURTAINS

Add-ons & Options

(Available Exclusively From Goff's):

Floor Mount Wind Ties

Any Goff's Aero-Curtain can be equipped with "Floor Mount Wind Ties". These easy to fasten tie downs are sewn directly onto the bottom of the Aero-Curtains keeping light breezes from blowing curtains around. The 4", steel, surface mounted pan encompasses a flip-up "D" ring that keeps the curtains held down via a 1" nylon webbing/steel clip fastener system. The floor mount easily attaches to the concrete via 2-1/4" concrete rivet pin bolt drives (included with package). This system is ideal for Aero-Curtains hung around air filtration systems or in breezy areas.

Filter Wall Curtain Panels

These Filter panels, allow air exchange between any two areas which the Aero-Curtains separate. The filter panels are easily removable and replaceable due to the 2" wide industrial hook and loop fasteners which are sewn directly onto both the curtain and filter panels. The 2'x4' or 4'x4' filter sections are the perfect way to direct airflow in your Aero-Curtained hangar.

Aero-Curtain Cleaner & Protectant

Goff's Curtain Shield provides a semi-transparent, protective coating that when applied, dirt and overspray will attach to, rather than sticking to the curtain itself. Curtain Shield dries to a tack-free, transparent, flexible and protective shield that intercepts dirt and overspray before reaching and damaging your Aero-Curtain.

Goff's Curtain Cleaner is a safe and effective way to clean the entire Aero-Curtain without damaging the vinyls. It is designed to be environmentally safe, biodegradable, non-hazardous and non-flammable.

Aero-Curtains can be rolled out of the way when additional space is needed.

This is what one satisfied Aero-Curtain customers had to say . . .

"...For us, the Aero-Curtains were not an option, but a necessity. We could not afford the space to alienate an area of that size for painting alone, so by using the curtains we allow ourselves the flexibility to roll them out of the way when necessary and open up that same space for other aircraft maintenance when needed.

...These Aero-Curtains are tough as nails!!"
